

SAURABH NARENDRA TAJANE

DevOps & Cloud Platform Engineer | Backend-Aware
Bengaluru, India • +91-9404562161 • saurabhtajane07@gmail.com • [LinkedIn](#) • [GitHub](#)

PROFESSIONAL SUMMARY

DevOps and Cloud Platform Engineer with ~3 years of experience automating infrastructure and delivery for enterprise SAP workloads on IBM Cloud. Currently the sole DevOps owner of a production Infrastructure-as-Code automation suite (Terraform + Ansible) that is published on the IBM Cloud catalog and open-sourced under the IBM Cloud organization. Strong across IaC, CI/CD, and shift-left DevSecOps, with hands-on experience in HA and DR architectures for SAP. Backend-aware, with a microservices development background in Java/Spring Boot, enabling effective collaboration with engineering teams.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, VPC, IAM, EKS – certification-level), IBM Cloud (VPC, VSI, COS, Schematics, Secrets Manager, Toolchains)

IaC & Config Management: Terraform (modules, remote/Schematics state), Ansible (roles, Jinja2 templating)

Containers & Orchestration: Docker (multi-stage builds), Kubernetes, KIND, Helm basics

CI/CD: Tekton / IBM Cloud OnePipeline (Toolchain), Jenkins, GitHub Actions, Travis CI

DevSecOps & Testing: tfsec, Checkov, Terratest (Go), Syft & Grype (SBOM/vuln scan), Mend (SAST/SCA), pre-commit hooks (secret-leak, YAML lint)

SAP Automation: NetWeaver, HANA (HSR / HA / DR), ASE, DB2, MaxDB – silent installs & clustering (Pacemaker)

Programming & Scripting: Python, Bash/Shell, Java, Spring Boot

Backend (working knowledge): Spring Boot, REST APIs, Microservices, Kafka, PostgreSQL, MongoDB, Redis

OS & Tools: Linux (RHEL), Git/GitHub, Maven, IntelliJ IDEA

PROFESSIONAL EXPERIENCE

Infobell IT Solutions Pvt. Ltd., Bengaluru — Software Engineer

May 2023 – Present

Client: IBM | SAP Infrastructure Automation (WES Team)

Current

Tech: Terraform, Ansible, Tekton/OnePipeline, IBM Cloud VPC, Python, Go, Mend, SAP (HANA, NetWeaver, ASE, DB2, MaxDB)

- **Sole DevOps owner** of a production Infrastructure-as-Code suite (inherited from an offboarded team) that automates end-to-end SAP deployments on IBM Cloud — **published on the IBM Cloud catalog and open-sourced under the IBM Cloud organization.**
- Reduced SAP deployment time by **~70%** (from ~6–7 hours of manual, documentation-driven setup to ~2 hours for standard and ~4 hours for HA deployments) using **modular Terraform** for infrastructure (VPC, subnets, security groups, VSIs, block storage, load balancers, DNS, file shares) and **role-based Ansible** with Jinja2-templated silent installs for SAP application, filesystem, and OS tuning.
- Automated complex **High Availability and Disaster Recovery** architectures — SAP HANA System Replication (HSR async/logreplay), Pacemaker clustering, and ASCS/ERS cluster setup — across NetWeaver, ASE, DB2, and MaxDB workloads.
- Engineered a complete **shift-left DevSecOps pipeline**: tfsec, Checkov, Terraform validate/fmt, Terratest (Go), SBOM generation and vulnerability scanning via Syft & Grype, and pre-commit hooks for secret-leak and YAML lint validation.
- **Migrated 20 repositories** from Travis CI to a Tekton-based IBM Cloud OnePipeline (Toolchain), using CEL-filtered triggers; automated deploy stage currently being finalized.
- Onboarded **multiple repositories across Python and C/C++** to Mend for SAST/SCA scanning; remediated vulnerable dependencies and eliminated false-positive findings by correcting scan configuration.
- Built **self-initiated Python automation** to eliminate manual toil — generating IBM Cloud inventory reports (VSIs, floating IPs, VPCs, VPN servers) as formatted Excel and delivering them via Slack webhook on an IST-scheduled cron.
- **Designed and delivered a 5-day Terraform & IBM Cloud training series** for 4 senior engineers new to the stack, adapting from slides to live CLI/UI demos based on Day-1 feedback.

Client: AMD | EPYC Advisory — Deployment & CI/CD

~3 months

Tech: Jenkins, AWS (EC2), CI/CD

- Built and configured **Jenkins CI/CD pipeline stages** (build and deploy) for advisory-platform applications running on **AWS EC2** instances.

- Automated the EC2 deployment step with a script that copied the build artifact (JAR) to the instance and restarted the application service for each release.
- Diagnosed and resolved pipeline and deployment failures to keep release cycles unblocked.

Aarogya Mandi — eHealth Platform (Capstone Project)

~1 year

Tech: Java, Spring Boot, Microservices, React, REST APIs, PostgreSQL, Docker, Kubernetes, AWS, Terraform, Jenkins

- Contributed to a Practo-like healthcare platform (~25 microservices, 400+ REST APIs) built end-to-end from development through cloud deployment.
- **Owned 6 microservices end-to-end** across the medicine / e-pharmacy domain — Product, Inventory, Discount, User, and Payment services plus the Medicine React frontend — covering Spring Boot backend, containerization, and deployment.
- Containerized services with Docker, authored Kubernetes manifests, and provisioned AWS infrastructure (VPC, subnets, security groups) via Terraform with Jenkins-based CI/CD.

PERSONAL PROJECT

Spring Boot Microservices Platform — github.com/saurabh7nt

Tech: Spring Boot, Spring Cloud Gateway, Service Discovery, Kafka, Resilience4j, Docker, Kubernetes (KIND)

- Built (solo) a microservices system with **5–6 services**, an API gateway, service discovery, **Kafka-based asynchronous communication**, and **circuit breakers** for resilience.
- Authored a Dockerfile per service, a docker-compose stack with PostgreSQL, and **Kubernetes manifests with ingress**; deployed and validated on a local KIND cluster.

CERTIFICATIONS & COURSES

- **CKA – Certified Kubernetes Administrator** (Linux Foundation) — in progress.
- AWS Certified Cloud Practitioner (CLF-C02) — Udemy course.
- Kubernetes (CKAD curriculum) — Udemy course.

EDUCATION

Post Graduate Diploma in Advanced Computing (PG-DAC) — C-DAC, Mumbai
B.Tech in Food Technology — Dr. PDKV University, Akola

Grade A | 2022–23
CGPA 7.7/10 | 2017–21
